Mixing, Dispersion, Emulsion

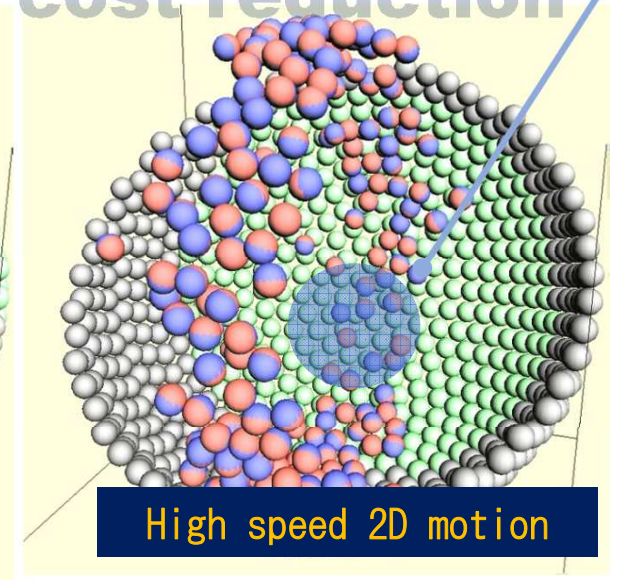

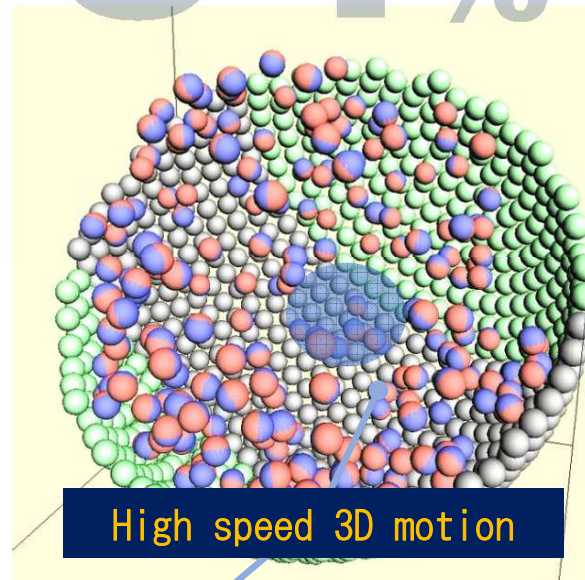

Overcoming specific gravity and viscosity difference

2D motion is difficult to mix with specific gravity and viscosity difference between metal and resin.

However, high-speed 3D motion can be overcome.

54%

cost reduction

Container surface

Non-critical **100%** Utilization

- High speed 2D motion which makes use of container surface only a little.
- High speed 3D motion utilizing the entire container surface.
